Testing our implementation

It works, but is it really correct?

CRDTs have laws
State-based CRDTs

- Recall state-based CRDT definition

    - A binary *merge* operation that is

        - Associative

        - Commutative

        - Idempotent

    - A neutral element that also serves as the initial state for a new replica
